## Background Information

**Languages:** English

**Real Name:** Tony Stark

Anthony Edward Stark, the son of wealthy industrialist and head of Stark Industries, Howard Stark, and Maria Stark, is born on Long Island 40 years ago. A boy genius, he enters MIT at the age of 15 to study electrical engineering and later receives Master's degrees in electrical engineering and physics. After his parents are killed in a plane accident, he inherits his father's company at age 20.

His party boy public persona and technical innovations in the realm of weapons design made him a media star practically from day one. About 10 years ago, Stark went to Afghanistan to supervise a field test for one of his transistorized weapons. He ignored his friend, US Marine, James Rhodes', concerns that security was insufficient. His convoy was ambushed and Stark was critically wounded by one of his own missiles. He was captured and imprisoned in a cave by the terrorist group the Ten Rings. An electromagnet grafted into Stark's chest by fellow captive, the renowned physicist and Nobel laureate Professor Ho Yinsen, kept the shrapnel shell shards that wounded him from reaching his heart and killing him. Ten Rings leader Raza offered Stark freedom in exchange for building a Jericho missile for the group, but Tony and Yinsen knew that Raza would not keep his word.

Stark and Yinsen secretly built a powerful electric generator called an arc reactor to power Stark's electromagnet and then began to secretly build a suit of armor powered by the reactor as a means to escape. Although they kept the suit hidden almost to completion, the Ten Rings attacked the workshop when they discovered their intentions. Yinsen sacrificed himself to divert them while the suit powered up. The armored Stark battled his way out of the cave, only to find the dying Yinsen, then the enraged Stark burned the Ten Rings weapons and flew away, only to crash in the desert, destroying the suit. After being later rescued by Rhodes, Stark returned home and announced that his company will no longer manufacture weapons. Obadiah Stane, his father's old partner and the company's manager, advised Stark that this may ruin Stark Industries and his father's legacy but Tony's mind was made up. In his home workshop, Stark built an improved version of his suit, as well as a more powerful arc reactor for his chest. Stane requested details but Stark keeps his work to himself.

After some time in seclusion, he attends a charity event held by Stark Industries, Stark that his company's weapons, including the Jericho, were recently delivered to the Ten Rings and were being used to attack Yinsen's home village, Gulmira. Stark also learns Stane is trying to replace him as head of the company. Enraged, Stark donned his new armor and flew to Afghanistan, where he saved Yinsen's village and delivers a devastating blow to the Ten Rings. Later, the Ten Rings gathered the pieces of Stark's prototype suit and met with Stane, who double crossed Raza and had the rest of his group eliminated. Stane has a new suit reverse engineered from the wreckage. Seeking to find any other weapons delivered to the Ten Rings, Stark sent assistant Virginia "Pepper" Potts to hack into the company computer system from Stane's office. She discovered Stane has been supplying the terrorists and hired the Ten Rings to kill Stark, but the group reneged. Potts met with Agent Phil Coulson of the "Strategic Homeland Intervention, Enforcement and Logistics Division", a counter-terrorism agency, to inform him of Stane's activities.

Stane's scientists could not duplicate Stark's arc reactor so Stane ambushed Stark at home, using a sonic device to paralyze him, and takes his arc reactor. Left to die, Stark managed to crawl to his lab and plug in his original reactor. Potts and several S.H.I.E.L.D. agents attempted to arrest Stane, but he put on his armored suit and attacked them. Stark fights Stane, but is overmatched without his new reactor to run his suit at full capacity. Stark lured Stane atop the Stark Industries building and instructs Potts to overload the large arc reactor there. This unleashed a massive electrical surge that knocks Stane unconscious, causing him and his armor to fall into the exploding reactor, killing him.

The next day, the press had dubbed the armored hero "Iron Man". Agent Coulson gave Stark a cover story to explain the events of the night and Stane's death. At a press conference, Stark began giving the cover story, but paused and then announced that he was Iron Man.
